DETAILED ACTION

Status of Application, Amendments, And/Or Claims

The Information Disclosure Statement (IDS) filed 6 May 2004 and 9 May 2005 have been entered in full. Applicant's amendment of the claims filed on 9 August 2006 is acknowledged.

Applicant's election of Group I, claims 1-11, and species election of "IL-1 trap", in the reply filed on 9 August 2006 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claims 6-9 and 12-20 have been cancelled. Claims 1-5, 10 and 11 are pending and under examination.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5, 10 and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Sims et al. (U. S. Patent Application No: US2001/0053764A1, published on 20 December 2001). Sims et al. teach a method for treating an individual including a human, who is suffering from a cardiovascular disorder, such as restenosis, atherosclerosis and vascular occlusion [0040], comprising administering an IL-1

antagonist or IL-1 inhibitor that inhibits IL-1 signaling [0007]. Sims et al. teach that such cardiovascular disorders may be caused by heart surgery or angioplastic procedures [0040]. Sims et al teach that such antagonists include IL-1 traps, which are described in WO 018932 [0009][0010]. WO 018932 (document listed on 9 May 2005 IDS) describes an IL-1 trap comprising an extracellular domain of human IL-1 accessary protein (Il-1RacP), an extracellular domain of human IL-1 receptor (IL-1RI), and a multimerizing component (Fc domain) (pp. 55, line 29 through pp. 56, line 5). Sims et al teach that administration may be intravenous or subcutaneous, and may be single or multiple injections, or continuous infusion [0020]. Therefore, Sims et al. anticipate the instant claims.
